

Project & Evidence Canvas

Page 1 decides what you build. Page 2 proves it. Fill it in as a team, in pencil first.

Team	Project name	Track
		☐ Genesis (idea to MVP) ☐ Scale (prototype to product)

1. User

Who has the problem? Role, place, size. "Freelancers" is too broad to decide anything.

2. Problem today

What goes wrong now, how often, and what it costs the user.

3. Alternatives

Include what people use today without blockchain: a spreadsheet, a bank transfer, doing nothing.

Alternative	What it does well	Where it fails for our user

4. Our difference

One thing we do that the alternatives do not.

5. Why Stellar

What breaks or gets worse without it? Name the piece: a contract, a stablecoin, an anchor, an existing protocol.

6. Value proposition

For [user] who [problem], we [result], using Stellar to [reason].

7. MVP scope

Only what the demo journey needs. Everything else goes to the roadmap slide.

Build during the event	Roadmap (not now)

8. Demo journey

One user, one journey, ending in something a judge can check.

#	What the user does	What Stellar does	What a judge can check
1			
2			
3			
4			

9. Evidence matrix

OFFICIAL rows come from the HackMeridian Lisbon 2026 FAQ. WORKSHOP rows are our recommendations, not scoring rules. Check the latest event rules before you submit.

Source	Criterion or priority	Our claim	Evidence	Link or location	Owner / status
OFFICIAL	Smart contracts				
OFFICIAL	Smart accounts (if used)				
OFFICIAL	Cross-chain transfers (if used)				
OFFICIAL	Clear README with how it works and specs				
WORKSHOP	Real user need				
WORKSHOP	Difference vs alternatives				
WORKSHOP	Verifiable on-chain result				

10. Open dependencies and risks

Dependency	Plan B	Owner
