

Demo & Pitch Playbook

Three minutes to show one working journey. These timings are a teaching default: adapt them to the event limits.

A. The three-minute script

Say and show are different jobs: your voice explains why, the screen proves what.

Time and goal	What we say	What is on screen
0:00 to 0:20 Who has the problem and what they need		
0:20 to 0:40 How the project solves it and what Stellar adds		
0:40 to 2:10 One complete journey, ending in a verifiable result		
2:10 to 2:40 What you built, what you validated, what is still limited		
2:40 to 3:00 The value you showed and the next step		

B. Rules for the script

- One user, one journey. Cut every step that does not lead to the result.
- End the journey on something a judge can check: a transaction, an explorer link, a contract state change.
- Say any simulated part out loud and label it on screen.
- Keep your own words for what you built. Name the protocols and code you reused.

C. Prepare the demo

- ☐ Demo accounts created and funded on testnet, with names you can read out loud
- ☐ Test data loaded: realistic, clearly fake, no personal data
- ☐ Contract IDs and explorer links saved in the README and in a note you can open fast
- ☐ Every link opened from a logged-out, private browser window
- ☐ Simulated parts listed: what, why, and what the real integration would need
- ☐ Wallet pop-ups, passkeys and permissions tested on the laptop you will present from
- ☐ Screen zoom at 125% or more, notifications off, extra tabs closed

D. Record the backup

- ☐ One full run recorded end to end, inside the time limit
- ☐ Captions or a short voice-over for each step
- ☐ Uploaded somewhere viewable without login, and linked from the README
- ☐ A screenshot of each step, as a last resort

E. Rehearse

- ☐ Two full runs with a timer, one of them led by the second presenter
- ☐ One run on the event wifi or a phone hotspot
- ☐ Three likely judge questions written down, each with a one-line answer

Likely question	Our one-line answer
What is on-chain and what is not?	
What did you build during the event?	
Who asked for this?	

F. If it breaks live

Switch to the recording without a long apology. Say what failed, open the explorer link from a previous run, and carry on with the story. Notes on our own plan:
